

RANGE RESIDUE RECYCLING / RANGE MAINTENANCE

ABOUT US

What We Do

Demil Transport Services is one of the trusted leaders when it comes to support for Range Sustainment. We provide a one stop shop for all activities relating to the maintenance and upkeep on Military Training Ranges across the United States.

Working Together

Our company has worked with numerous range sustainment contractors and customers during the last 18 years. We offer an end-to-end client experience that includes seamless communication, budgeting, staffing, on-site organization, and solid, quality work every time.

Proven DEMIL Processes That Work!

RANGE RESIDUE RECYCLING SERVICE

Recycling of Range Residue

- We have processed over 10,000 tons of range related debris over the past 18 years.
- We utilize various methods to achieve demilitarization ensuring all material that leaves the range gets processed down to the level of scrap.

BDU 33's/MK76 Crushing

- A rotary impact crusher is used to demilitarize and recycle military practice ordnance such as MK76/BDU33's. The crusher disfigures the item so it no longer resembles military munitions and can be safely recycled.

Processing MPPEH to MDAS

- All our material that departs the range will adhere to the guidance dictated by DODM 4160.28-V3 and DODI 4160.62.
- We perform MDAS certifications, chain-of-custodies, DD1348-1, and certifications for LLRW (Low-Level Radioactive Waste) screening.

Heavy Tank Armor Recycling

- We have personnel specialized in the demilitarization of heavy steel using cutting torches. Typical targets include military armored vehicles processed into 3' x 4' sections for recycling purposes.
- We perform MDAS certifications, chain-of-custodies, DD1348-1, and certifications for LLRW (Low-Level Radioactive Waste).

Roll Off Service

- Various sized rolloff containers ranging from 10 cyds to 40 cyds. Containers are available as open-top or secured lid and sealable. Our company has an outstanding relationship with recycling foundries across the US.

RANGE MAINTENANCE SERVICES

Target Removal

- We can remove unserviceable targets ranging from connex containers to heavy armored battle tanks.
- Equipment available for removal projects are: rock trucks, rolloffs, loaders, excavators, tractor trailers, flatbeds, and skidsteers.

Target Revitalization

- We have experience in the transportation, placement, and painting of targets to simulate real-world training environments.
- These targets include ISO Containers, silhouettes, "green" targets, armored vehicles, etc.

Target Prep

- Removal of RCRA waste from vehicles being used for targets.
- Removal of all specular hazards per laser range safety guidelines.
- Painting of targets.

Soil Screening

- Vibrating screens and classifiers for screening through soils. Projects include removal of munitions debris from burial pits and bullet reclamation on shooting ranges.

Soil Stabilizer / Dyes

- Experienced in the application of soil stabilizers: Soiltac®, Gorilla Snot® and Rhinosnot®
- Avoid costly cleanup fees from utilizing rental equipment.
- Pigments and dyes can be used to simulate mock runways, roads, or grass fields.
